**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-27 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Langer et al., 6,004,295. Langer et al. discloses a syringe barrel (58), a plunger (40 and 38); and a handle including a first member (i.e., portion of 48 pivotally connected to 58, see Figure 5 and Figure 7A) configured to be held by a first part of a user's hand, said first member being pivotally connected to said syringe barrel; and a second member (i.e., portion of 48 pivotally connected to 40, see Figure 7A) configured to be held by a second part of a user's hand, said second member being pivotally connected to said plunger, said first and second members being connected one another in pivotal relation, see column 5, lines 40-45, and Figure 7A.

Said first and second members are secured to one another by a hinge, see column 5, lines 40-45. At least one of said first and second members comprise a slot through which said hinge extends, and said slot and said hinge include cooperating teeth, wherein said hinge and teeth of said slot mutually engage each other, see column 5, lines 40-45.

As to claim 21, the injection device is used to inject fluid, see column 2, lines 57-60.

As to claim 22, pivoting said first handle and said second handle away from one another creates a negative pressure within receptacle of syringe, see column 1, lines 22-23, and column 5, lines 40-56.

As to claim 25, the fluid is considered to be comprised of at least one gas.

As to claim 26, the injector is coupled to an angioplasty catheter that communicates with a balloon, see column 1, lines 22-25, and column 2, lines 57-60.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lane, 5,733,258, discloses an injector that uses a scissor-like mechanism.
